

How Many Queries Do I Need to Run?

for health plans, hospitals, networks, and similar health care systems

Centralized Credentialing

Dr. Wilson applies to NoMed Health System, which has one decision-making body for all of its facilities.

vs

Decentralized Credentialing

Dr. Smith applies to AdMed Health System, which has three decision-making bodies for its four facilities.

The NoMed credentialing office assembles a file on Dr. Wilson with one query response.

They share it with the decision-making body, who is responsible for all facilities oversight, including conducting credentialing and peer review processes.

The board grants privileges. Dr. Wilson can now work at **any** NoMed facility within the health system.

Modified Oct. 2019

The AdMed credentialing office assembles three files on Dr. Smith with a **different query for each facility** to share with the separate decision-making bodies.

AdMed has three decision-making bodies that are responsible for the oversight of their own facilities. They decide for their facilities if they want to grant privileges to Dr. Smith.

One board doesn't grant privileges.

Two boards grant privileges. One of the AdMed boards makes decisions for two facilities.

Dr. Smith may only work at the AdMed facilities that the two boards oversee.
